

# CIRCLES FOR SUSTAINED MENTORING BY CLINICAL LEADERS

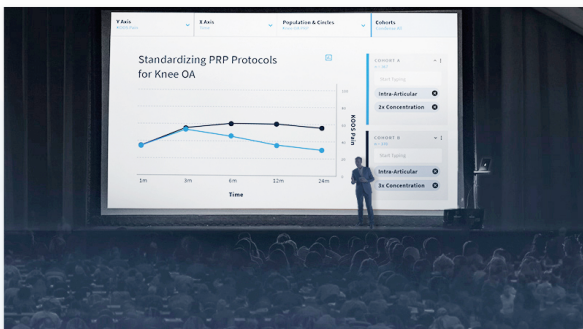

Medical thought leaders highly value mentoring young residents, fellows, and medical students. However, as those mentees move on it can be difficult to preserve the energy and productivity of the initial relationships. And collaboration during those subsequent years can be the most valuable for both sides. [Circles](#) are the ideal platform to maintain, and indeed expand, that value.

Easily collaborate across institutional and national boundaries on study designs for any clinical/scientific topic, any degree of complexity.

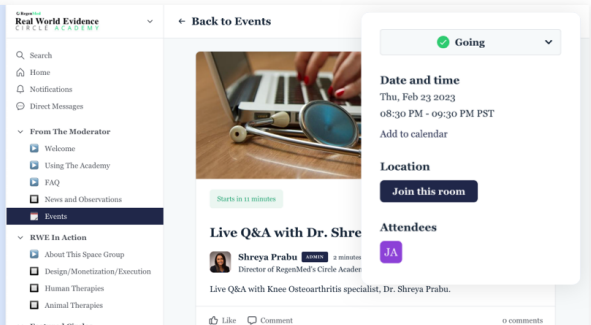

Eliminate challenges created by incompatible EMR systems, languages, IRB/MEC policies and individual practice variations.

Capture clinical, scientific, and financial value from the real-world evidence generated daily in your and your colleagues' practices.

Efficiently develop data-driven conference, educational, website, journal, and social media materials.

Secure social media functionality enables active, sustained collaboration, teaching, and learning.

# USED BY PROVIDERS AND INDUSTRY AROUND THE WORLD

Clinical grade, turnkey, integrated, flexible, minimal burden.

**Typical opiate dosage? \***

Fill-in 2.5, 5, 7.5, 10, 25 or 50 number. If you don't take opiates enter "0".

 mg

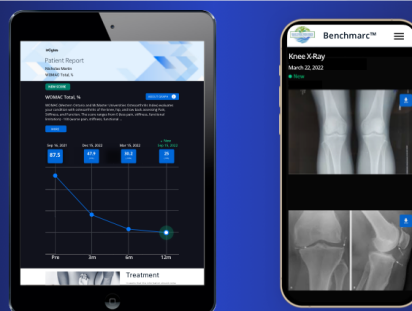

**How often are you taking NSAIDs for pain management? \***

Examples of NSAIDs include Ibuprofen, Naproxen, Diclofenac, Celecoxib, Mefenamic acid, Etoricoxib, Indomethacin, high-dose Aspirin (low-dose Aspirin is not normally considered to be an NSAID).mg

- Four times a day or more
- Three times a day
- Twice daily
- Daily
- Less than daily
- None/I don't know

RCT's, pragmatic studies, IRB submissions, registries, PROMS.

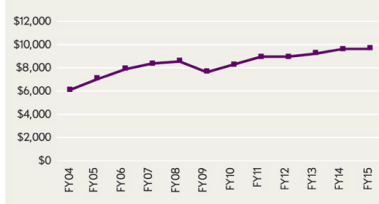

Own and control your datasets. Accessible from any device 24/7.

Excellent user experience for clinicians and patients.

Support for industry funding.
